

The Lake Committee Report. Meeting held November 7, 2022

BEACH TESTING

- Weekly testing has ended for the season.

WLLA DAM

- See dam report

Lake Clarity

- One cause of reduced clarity in our lake is sediment from impermeable surfaces. Runoff from roads and driveways can deposit debris in the lake. In the winter it can also include road salt and chemicals used to treat roads. Please make sure all swales and drainage ditches on your property are cleaned out to allow the proper water flow.
- A good practice is to allow natural vegetation to replace manicured/fertilized lawns, even if it is only a 10'-20' area next to the shoreline for lakefront owners.
- We also discourage the use of fertilizers and weed killers on lawns as these are harmful to the lake and the plants and animals that live there.

Beaver Issues

- We have received several emails about the beaver causing serious damage in Fishers' Cove. If the board approves, we can contact the Game Warden who could set live traps starting at Christmas- when they're trappable.
