

Lake Committee Report. June 3, 2026

Beach testing has started for e-coli bacteria. Results are good so far. A couple of volunteers are picking up goose droppings at the clubhouse beach. Hopefully this will keep the e-coli bacteria low & not result in beach closings.

Aqua Link conducted the macrophyte survey & first aquatic plant treatment on May 28. Waiting to hear from them concerning the results.

A tagged largemouth bass was caught. If future bass are caught, we are interested in tag number & length & weight of the fish. In addition, we encourage fisherman to report this through the creel survey.

Coordinating with Aqua Link regarding the installation of fish habitat structures.

Less snails at the clubhouse beach so far this year.

A family of Canada Geese with 2 goslings and several individual adults on the lake.

In order to continue to keep Walker Lake healthy, we remind all residents to keep pets off of the beaches and to have their septic systems pumped and inspected regularly.
